(54) DEVICE FOR SETTING PRESS WORKING CONDITION OF PRESS MACHINE

(57)Abstract:

PURPOSE: To automatically set the press working condition of the press machine corresponding to a die to be used.

CONSTITUTION: As to die information, a blank holding load F_{so} stored in an ID card 96, the weight W_r of a blank holding ring 30, and the using number (n) of cushion pins 24 are read in, and as to machine information, the weight W_a of a cushion pad 28 preliminarily stored, the weight W_p of the cushion pin 24 and the pressure receiving area A_a of an air cylinder 42 are used to calculate an air pressure P_{ax} following the equation, shown below, and an ON-OFF suction and exhaust valve 46 is switched and controlled so that the air pressure P_a inside an air tank 44 required as the press working condition becomes the air pressure P_{ax} . $P_{ax} = (F_{so} + W_a + W_r + n \cdot W_p) / A_a$.

LEGAL STATUS

[Date of request for examination]

21.11.1996

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

3269113

[Date of registration]

18.01.2002

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
